### **APPENDIX**

#### **XML Error Handling**

For our 2011 technology, we have improved our exception handling and communication about problems in the API validation or problems in our processing.

#### **RESPONSE CODES**

For response XML root element or response object that have a 'status' field as an attribute will be identified the general response type from Agoda's API servers.

#### Success Status:

Status Code	Status Meaning	Status Definition
200	Okay	Request has been accepted and processed
202	Accepted	Request is queued up for processing
204	No content	The request does not return any valid data
206	Partial content	The request has been successfully processed and there is content returned but this is not the complete set / Asynchronous search

#### **Error Status:**

Status Code	Status Meaning	Status Definition
400	Bad Request	The request could not be understood by the system, malformed syntax.
401	Unauthorized	If ApiKey not found or IP address restructions violated
403	Forbidden	You have violated our terms of use and exceed the quota of requests
404	FileNotFound	Service or file not found.
410	Gone	If the object of your request search id, book id, etc) is too old, no longer valid or times out
500	Internal Server Error	We have encountered and unrecoverable problem in the processing of the API call
503	Service Unavailable	Due to maintenance is that either planned or ad-hoc,

		service is temporary unavailable
506	PartialConfirm	Cannot process the entire request, need to contact customer service.

#### **RESPONSE BODY**

#### **Success responses:**

In case you received a success response status, the response body will, if applicable for the request, contain the response object as defined in the conversation specification.

#### Error responses:

In case you receive an error response, the response body will contain an <ErrorMessages> TAG with a collection of <ErrorMessage> elements that identify as best as we can identify the exact problems or validation problems that we have encountered while processing your request.

#### <ErrorMessages>

#### </ErrorMessages>
